AEROSPACE

Since 1974 we support the Italian and European Space Agency in the development of space system for Earth Observation, Telecommunication, Human flights and scientific missions.

DEFENCE &TRAFFIC CONTROL

We operates in the market of defence, homeland security and dual-use applications, bringing its excellence in the aspects of Quality, Safety and Software Engineering, Safety and Quality to the complexity of the systems involved, which make it unique in the panorama of companies in Europe.

RAILWAY

Railway domain leader in software and system development, Verification & Validation activities. We are also supporting ISA for Safety Assessment.

AUTOMOTIVE

For more than 20 years, Intecs Solutions has been supporting the major Italian and non-Italian automotive players with its technological skills in the field of real time and safety critical software systems. Design, development and validation of electronic control units but also high-level consultancy on the major standards applicable to the sector are the support offered.

SMART SYSTEMS

We firmly believe that intelligent and connected systems represent the new frontier of technological innovation. Systems cooperation allows you to work out solutions to common problems more intelligently than ever before

FINTECH

The Division combines the 'classic turnkey' development activities on specification (client/server applications, Cloud Solutions, Apps, etc.) with proposals for innovative solutions based on state-of-the-art technologies such as Block Chain, Artificial Intelligence and Big Data Analitycs.

OUR MARKETS

WHY WORK WITH US?

People are the foundation for INTECS. Work with us means being part of an innovative and inspiring reality.

SOLUTIONS AND SYSTEM INTEGRATION

We are able to provide "cross domain" solutions starting from the analysis of the idea, passing through the development of hardware and software, up to the validation and certification phases. Our approach to system design and development is flexible and adapts to the context and customer needs.

Despite the ability to design new solutions starting from the white sheet, we have acquired good experience in the integration of complex systems that require high skills and ability to solve problems in extremely critical conditions.

Advanced skills in electronics, firmware, software and mechanics work together to quickly create turnkey solutions and systems.

INTECS SOLUTIONS LABS

Intecs Solutions LABS represent a fundamental component in our development and innovation process. Conceived as groups of experts specialized in innovative technologies (e.g Artificial Intelligence, Machine Leraning, Blockchain) they have the main goal of developing customized solutions in line with the most modern technological trends.

COMPANY MATURITY

INTECS is a leading company founded in 1974 and is the oldest software company in Italy. Founded with only four people in a large garage in the middle of "Tiburtina Valley" (the area in Rome where most of the high-tech corporations reside), it now has offices in Rome, Naples, Milan, Turin, Pisa and Reggio Emilia. INTECS today has attracted more than 500 engineers.
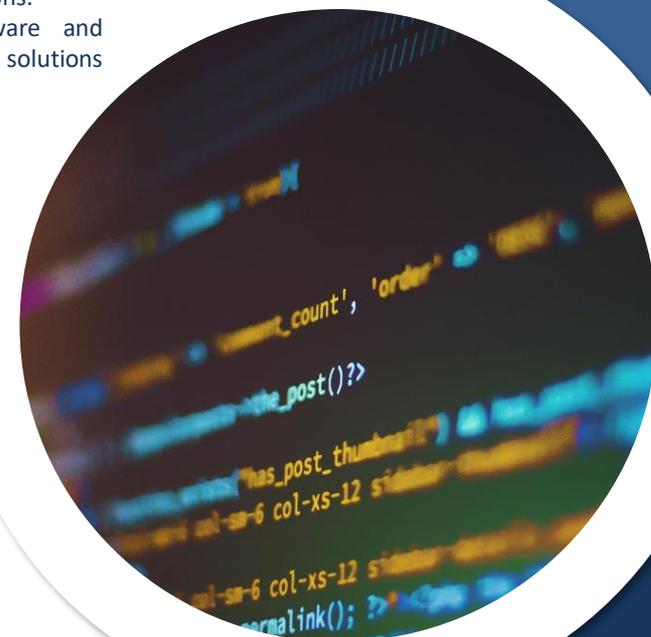

CONSULTING

Taking advantage of the technological knowledge acquired over the years our consultants are able to support customers by generating value for their activities. Intecs Solutions' offer for consultancy is therefore characterized by highly qualified professional profiles, both for reference and emerging markets, and includes consultancy services oriented to System and Software Engineering, software development, modeling, testing, quality and process improvement as well as assessment and training.

Intecs Solutions is particularly attentive to maintaining and increasing the skills of its staff, continuous updating is pursued through training and certification courses aimed at maximum adherence to consolidated and emerging technologies.

HIGH TECHNICAL SPIRIT

Since its inception, the focus in INTECS has been on technical systems: complex, embedded, real time, safety and security critical systems. We work in the most demanding sectors such as defense, space, air traffic control, communication, railway, automotive and smart systems. Cross-domain fertilization of know-how is a key asset of INTECS. Our main assets are competence and quality.

Thanks to the expertise acquired on all phases of the HW/SW systems life cycle, Intecs Solutions is able to support its customers in developing "Concepts" for new products in safety and non safety critical environments. Intecs currently develops also products for Transportation (obstacle detection at level crossings), Defense (UAV and Sniper detection) and Smart-System (acoustic mapping of outdoor environments) markets.
